

Model 145 Mud Balance

Description

The Model 145 Mud Balance much like the Model 140 Mud Balance provides a simple and practical method for accurate determination of fluid density. It is constructed of premium materials for durability, accuracy and ease of use. This unit provides the same accurate determination of density or weight-per-unit-volume (specific gravity) of drilling fluids that the Model 140 has while maintaining its most used measurements and features.

Features & Benefits

The Fann Model 145 Mud Balance is constructed with an easy-to read beam graduated into two scales:

- pounds per gallon
- pounds per cubic foot
- range of 7 to 24 pounds per gallon or Specific Gravity of 0.84 to 2.88
